Section 5: Value Proposition

Stop Paying OTAs for Guests Who Were Already Trying to Book Direct

- RECOVER REVENUE WHILE YOU SLEEP:

Every night, guests message your hotel on WhatsApp after 6 PM. No reply means they go to Agoda. Nocturn AI responds in under 30 seconds — capturing that booking before it disappears.

- GET PAID FASTER:

OTAs hold your money for 30–60 days. Direct bookings through WhatsApp mean same-day cash, deposited straight to your account — no waiting, no middleman.

- KEEP YOUR STAFF IN FULL CONTROL:

This is not a bot that talks to your guests without you. Nocturn AI drafts the reply. Your staff reviews it and hits Send. Your hotel's voice stays intact, every single time.

- SEE EXACTLY WHAT YOU RECOVERED:

Every morning at 9 AM, your GM gets one clear report: how many inquiries came in, how many were answered, and the exact ringgit amount recovered from direct bookings. No guesswork. Just numbers.

Section 6: Proof

Hotels Like Yours Are Already Recovering Revenue They Didn't Know They Were Losing

Note: No real testimonials were provided in your data. The two below are written in the style and voice of your ideal customer — Fahmi — based on

the research and operator interviews referenced on your page. Replace these with real quotes before publishing.

"I knew we were losing bookings at night, but I had no idea it was this much. The morning report showed RM 3,800 recovered in the first week alone."

— Hafiz R., General Manager, Boutique Hotel, Melaka

"We tried a chatbot before and guests hated it. This is different — my staff still sends every reply, but they're not scrambling to answer 40 messages at 2 AM anymore."

— Suraya M., Reservation Manager, 3-Star Hotel, Kuala Lumpur

Authority and Trust:

Insert a logo strip here featuring any well-known properties, hospitality groups, or industry partners you have worked with. If you have delivered projects for Sunway Lost World of Tambun, Ascott properties, or similar named institutions, their logos here will do significant work in building immediate credibility with skeptical hotel owners.

Suggestions:

- The two testimonials above are placeholders. Your founding cohort of 10 properties is the fastest path to real proof. Consider asking each founding partner for a short written quote after their first 30-day report — even a single sentence with a real RM number will outperform any placeholder.
- Your daily GM report (the mock-up on your page showing RM 4,280 recovered, 14 inquiries handled, 94% positive sentiment) is one of the strongest proof elements you have. Consider using a screenshot or a styled visual of that report directly in this section — it is concrete, specific, and speaks the language your customer cares about most.
- If you have data from your operator interviews (e.g., "90% of Malaysian hotel bookings come from manual channels"), use those figures here as a third proof element. A short stat block — "30+ daily inquiry touchpoints. 0% captured after 6 PM. RM X,XXX lost per month." — would land hard between the testimonials and the logo strip.

- An "Agoda commission saved" counter or a simple before/after comparison table (which you already have on the page) could be pulled into this section to reinforce the financial proof without needing testimonials.

Section 7: Origin Story

Why I Built This Instead of Selling Another Platform

For over a year, I sat across from Revenue Managers, Reservation Managers, and GMs who had collectively managed thousands of hotel rooms across Malaysia, Singapore, and the Gulf. Every single one told me a version of the same story.

"We have the demand. Guests are trying to reach us. But between WhatsApp, email, phone calls, and OTA messages — things fall through the cracks."

I had heard this before. In my years delivering systems for hotels, hospitals, and theme parks — properties where a failure at 3 AM is not an abstract risk, it is a visible, costly event — I understood what it meant to build something that had to work without supervision. I had maintained 99.9% uptime across six cities simultaneously during MCO restrictions. I had reduced deployment issues by 40% through systematic pre-launch testing. I knew how to build things that held.

But what I kept hearing from hotel operators was not a systems problem. It was a gap problem. A gap that opened every night at 6 PM, when the reservations team went home, and stayed open until 8 AM the next morning. And inside that gap, real money — guests who had already found the hotel, already typed out a message, already decided they wanted to book — was quietly walking out the door to Agoda.

The tools that were supposed to fix this were not built for Malaysian hotels. They were built for Western markets that do not run on WhatsApp. They required months of API approvals, dedicated IT teams, and five-figure setup costs. The ones that were affordable were generic chatbots that could not handle a real booking conversation — and frustrated guests more than they helped.

I was not interested in building another platform that charged a fixed monthly fee whether it worked or not.

What I built instead was a direct answer to what those operators described: a system that sits over your existing WhatsApp, catches every inquiry that comes in after your team goes home, drafts a reply your staff can send in one click, and delivers a clear ringgit figure to your GM every morning showing exactly what was recovered. No API. No IT project. No replacing your staff. Live in 48 hours.

Nocturn AI is in its founding stage. That means you get my direct attention, the fastest iteration, and the ability to shape this product around your property's real needs. I have been burned by overpromising vendors in other projects. I know what that skepticism feels like from the other side of the table. That is why there is no lock-in contract, and a 30-day guarantee that is measured in ringgit — not in "messages sent" or "response time."

If the numbers do not show up in your morning report, you do not continue paying. It is that simple.

— Ahmad Basyir Azahari, Founder, Sheers Software Sdn Bhd

Suggestions:

- The founder photo and direct WhatsApp contact you already have on the page belong here, directly below the sign-off. A face and a real contact number do more for trust in this section than any design element.
- Consider adding one specific data point from your operator interviews — for example, the "0% of inquiries captured after 6 PM" stat — inside the story itself, attributed to your research. It grounds the narrative in evidence and signals that this product was built from listening, not assumption.
- The line about maintaining 99.9% uptime across six cities during MCO is a strong credibility signal for a Malaysian hotel owner. It tells them: this person has built things that cannot fail. Keep it, and consider making it slightly more prominent — perhaps as a pull quote or a bolded line within the section.
- If you have a short video of yourself telling this story in two to three minutes, place it here. For a founder-led product at the founding cohort stage, a face-to-camera video in this section will significantly increase trust and conversion among skeptical hotel owners who have been burned before.
