Section 13: Frequently Asked Questions

FREQUENTLY ASKED QUESTIONS

Does this replace my current PMS or Opera system?

No. Nocturn AI sits on top of what you already have. No system replacement. No IT project. Your current setup stays exactly as it is.

I already use WhatsApp for everything. How is this different from what I do now?

Right now, WhatsApp stops working when your staff goes home. Nocturn AI keeps it running after 6PM — capturing inquiries, drafting replies, and logging every lead so nothing falls through overnight.

What happens to inquiries that come in at 2AM?

Nocturn AI responds within 30 seconds. It captures the guest's name, intent, and contact details. Your team reviews everything at 9AM and confirms the booking. No inquiry gets dropped.

Will it sound robotic to my guests?

Your staff reviews and sends every reply. The AI drafts it — your team approves it. Your hotel's voice stays intact. Guests get a fast, accurate response. You stay in full control.

What if the AI gives a guest the wrong rate?

The AI is trained specifically on your property — your room types, your rates, your packages, your policies. It does not pull generic data. If anything needs a human judgment call, it flags it for your team immediately.

How long does setup take? Do I need my IT team?

48 hours. We handle everything. Your team spends roughly 30 minutes total on onboarding. No IT team needed. No API approvals. No new hardware.

Is our guest data safe? What about PDPA?

Yes. Nocturn AI is built to comply with PDPA 2024/2025. Your guest data stays under your control. We do not sell, share, or use it outside your property.

What does this actually cost me?

RM999 one-time setup. RM199 per month for the platform. Then 3% only on confirmed bookings we directly helped close. If a booking comes in on its own, we take nothing.

What is the 30-day guarantee, exactly?

If the direct revenue we recover in your first 30 days does not exceed what you paid us, we waive the following month entirely. Hard numbers, reviewed together. No vague promises.

We tried a chatbot before and nobody used it. Why is this different?

Most chatbots are built to answer questions. This is built to recover revenue. It works on the channels your guests already use — WhatsApp, email, web — and it proves its value in ringgit every single morning.

Suggestions

- **Add a visual toggle/accordion:** These FAQs work best when collapsed by default. Guests scan the questions first and only open what concerns them. This keeps the page clean and avoids cognitive overload.
- **Place a CTA directly below this section:** After reading the FAQs, a guest's last remaining objection is usually gone. A short line like "Still have a question? Chat directly with Ahmad on WhatsApp" followed by a button would convert well here.
- **Consider a "You asked, we answered" intro line:** A single line above the FAQ list — something like "These are the questions hotels ask us most before they start" — adds context and signals transparency without being salesy.
- **The PDPA question is important for your market:** Malaysian hotel operators are increasingly aware of data compliance. Keeping that question visible (not buried) builds trust fast with your ICP.
- **Mirror the language your ICP uses:** Phrases like "we tried a chatbot before" and "will it sound robotic" are pulled directly from Fahmi's real objections. This signals to the reader that you understand their specific situation — not a generic hotel audience.
