Section 1: Attention-Grabbing Header

Stop Paying Agoda for Guests Already Texting You.

Right now, guests are WhatsApp-ing your hotel after hours. No one replies. They book on Agoda instead. You pay 18%. Nocturn AI closes those bookings before morning — without replacing your staff or touching complex tech.

Button: Recover My Direct Revenue

Suggestions

- **Hero image:** A split-screen visual works well here. Left side: a phone screen showing a WhatsApp message at 11:47 PM with no reply. Right side: the same phone showing a morning GM report with "RM 4,280 recovered." No people needed — just the phones, clean lighting, and a Malaysian hotel room visible softly in the background.

- **Authority logos:** Add trust signals just below the headline — logos from Sheers Software Sdn Bhd, the PDPA 2024/2025 compliance badge, and any recognisable Malaysian hotel brands you have worked with (e.g., Sunway Lost World of Tambun, Ascott properties). Even a single recognisable name builds immediate credibility with a skeptical hotel owner.

Section 2: The Core Problem

The Guest Was Already Yours. Agoda Just Picked Up the Phone.

Most hotel owners think they lose bookings because guests prefer OTAs. That is not what is happening. The guest found your hotel. They liked it. They opened WhatsApp and typed a message. Then they waited. And

waited. No reply came. So they went to Booking.com — not because they wanted to, but because someone answered.

You did not lose that guest to a better competitor. You lost them to a faster one. The real problem is not Agoda's marketing budget or their loyalty programme. It is the six-hour window between 6 PM and midnight when your reservations desk is dark and every incoming message sits on "Read." That gap is not a staffing failure. It is a structural one. No team of three people can cover 30-plus daily inquiry touchpoints and still go home at a reasonable hour. The system was never built for this.

Here is what makes it worse: you cannot see it happening. There is no report that says "three guests messaged you at 10 PM, got no reply, and booked Agoda by midnight." The money just quietly disappears. You see the OTA commission on the invoice and feel the sting, but you never connect it back to the WhatsApp message that started the whole chain. That is not your fault. It is a gap in visibility that most independent hotels have never had a tool to close.

Section 3: The Opportunity

What If Every Message After 6 PM Still Became a Direct Booking?

Nocturn AI sits between your WhatsApp inbox and the moment a guest loses patience. When a family messages at 11:47 PM asking about weekend availability, Nocturn AI replies in under 30 seconds — with your actual rates, your room types, your tone — and captures their details before they open a new tab. By the time your team arrives at 9 AM, the lead is warm, the conversation is logged, and the booking is one "Send" away. No API approval process. No new phone number. No IT project. It works on the WhatsApp Business app you already use.

What makes this different from every chatbot you have heard of before is the model. This is not full automation. Your staff stays in control of every conversation. Nocturn AI drafts the reply. Your team reviews it and hits send. That means your hotel's voice stays intact — the personal touch you have built your reputation on does not disappear behind a script. And because Nocturn AI is trained specifically on Malaysian hospitality — SST rates, Tourism Tax, public holiday surcharges, BM and English — the replies it

drafts actually sound like they came from someone who knows your property.

Picture waking up to a message that reads: "Last night — 14 inquiries received after 6 PM. 9 responded within 30 seconds. 4 confirmed bookings. RM 4,280 in direct revenue recovered. OTA commissions saved: RM 770." That number sitting in your inbox every morning is not a projection. It is a record of money that would have gone to Agoda, now staying with you. Over a month, that is RM 3,000 to RM 6,000 back in your account. Over a year, it is a room refresh, a staff bonus, or simply the breathing room you have been chasing for years.

Section 4: Who Is This For

WHO THIS IS FOR

The Reservation Manager

You handle 30-plus inquiry touchpoints a day across WhatsApp, email, and phone. You know exactly which messages fall through the cracks after 6 PM — and it keeps you up at night.

The Revenue Manager

You watch 15 to 25 percent of every booking go to OTA commissions. You have always suspected guests were trying to book direct first. Now you want the data to prove it — and a way to act on it.

The General Manager or Hotel Owner

Your ownership wants better results with a flat budget. You need a morning report you can stand behind — hard numbers on direct revenue recovered, not a gut feeling about what might have happened overnight.

Suggestions

- **Persona icons:** Keep them simple and professional. A calendar with a checkmark for the Reservation Manager (representing inquiry management), a bar chart with an upward line for the Revenue Manager (representing revenue tracking), and a building or key icon for the General

Manager/Owner (representing property oversight). Flat, monochrome icons work best here — avoid anything that looks like generic stock art.
